QuikTrac® Mobile

FROM INTEGRATED BARCODING

In today's global economy, you need to be able to react and change to your customer's needs fast! Having the ability to do this in real-time while out in the field can be the key to surviving. Giving your employees the ability to do their job faster and increase their capacity which will make them more productive will help keep you ahead of your competition.

QuikTrac® **Mobile** gives you the ability to deploy Mobile application within days by simply extending your current functionality to where the data collection needs to occur. *QuikTrac*® **Mobile** software uses the proven tools of our *QuikTrac*® family of software that allows us to develop your solution **FAST!**

The *QuikTrac*® family of software solutions provides you with everything you need for a seamless project development and integration. Our history of integration into many ERP solutions allows us to offer you a total turnkey solution from device/project development on the mobile device, to the back-end integration into your existing ERP software solution in days!

Stay in Sync with *QuikTrac*® Mobile

Now you can work outside the four walls, with 3 options to sync your data:

- Cellular via any wireless provider
- 802.11
- Cradle

Download data to use for validations to mobile devices and upload finished jobs to your server based on your needs.

QuikTrac® Development Module

Our *QuikTrac*® Development Module allows us to rapidly develop, maintain and deploy functionality to your projects in hours. With customized feature such as: drop down menus, check boxes, signature capture, and images added to a screen, we can provide you with a custom solution to meet your specific needs. Looking for a specific application? We have existing applications such as fixed asset tracking, field service, Inspection, Inventory Control, and Route accounting to name a few of the applications already created!

QuikTrac® Connect Manager

The *QuikTrac*® Connect Manager is the traffic cop of the system keeping each device in the field in sync with the host database along with sending any update back out to the device. Once the data is back into the host database, *QuikTrac*® can then connect that data back to your existing ERP system for real-time data integration.

QuikTrac® Mobile Printing Module

The *QuikTrac*® **Mobile** Printing Module allows you to print labels or receipts from any screen on your mobile printer. Simple design tools allow you to create your own label or receipts to WIFI, or Bluetooth printers connected to your device.
QuikTrac® Mobile Device Requirements

The system requirements for most mobile devices are: Windows Mobile 5 or higher, Windows Embedded, Android, or pocket PC please contact us with your specifications.

QuikTrac® Host System Requirements

Duo Core Processor with 4 Gig Ram, 40 Gig hard drive or higher, Windows 8, 10, and Windows Server 2012, or 2016 Databases include: SQL Server, MySQL, Access, Excel, and txt files.

Call Integrated Barcoding for more information or a web-demo. We will be glad to show you how fast and simple it is to use our *QuikTrac*® family of software solutions.
