# *QuikTrac* Modernize

With smartphone technolgy becoming a more user friendly GUI touch screen, why not make your manufacturing applications GUI too? *QuikTrac* Modernizing application tools can take any current *QuikTrac* application, legacy Green Screen applications, or programs developed for old Windows Mobile 6.5/CE and give them a new look without touching any of the existing code.

QuikTrac modernization starts with any application and creates a more modern touch and feel device for your endusers. We take a basic screen, add color and create a touch screen so that you have a more modern GUI touchscreen device which helps end users do their job better. This is all done without touching any of your existing code!

The only requirements are that the mobile device is running Android, or Windows 10 os. With Windows Mobile no longer an option, this would be a perfect time to refresh your hardware and add a new GUI touchscreen look to any of your existing application for your endusers without programming changes.

Before   After

Benefits:

* No custom programming required   * No changes to your existing program
* Simple to add color and logos to existing projects   * No .Net programming required
* Works with Android or Windows 10   * User friendly GUI technology
* Faster training of new users when using GUI   * Uses the power of *QuikTrac* software

Schedule a call today and we can show you how we can take your old software and make it more user freindly in days!
