- ✓ Pick Confirm

Oracle JD Edwards World Success Story:

"We automated our work order reporting using *QuikTrac* where all transfers, and production reporting is done with barcode scanners giving us real-time information at our fingertips. This has given all our team members the ability to know where our production and inventory levels are at all time.

"*QuikTrac* automated the Super Backflush process and eliminate human intervention, material issue and labor reporting. Our data is now real-time, which saves us time and money. This helped us meet our top customer's needs in the OEM and the aftermarket in inventory accuracy"
